What is on each page

Page	Content
Sign in	email and password
Dashboard	order tiles (Draft, In progress, Completed); for the Admin also the invoice tiles and a chart of orders by status
Sales work list	one row per job with its step (Draft, Confirmed, In production, Done)
QT page (one page for a job)	the steps of the job, customer, lines and total, Print button, customer PO upload (number, date, file), Confirm button; after Confirm a link to the production order (the factory adds the processes there)
Production orders	list of orders with their status
Production order	processes (Factory, Admin: before the start; Sale: read only), start, progress, the customer PO file, QT link, evidence upload (images and documents)
Purchase orders	the materials that are Low or Out (each with Create PO), the PO form, the PO list (see below)

Page	Content
Accounting	two sides: customers pay us (tabs To invoice / Waiting for payment / Paid; Issue invoice and Record payment in small dialogs; Open receipt) and we pay suppliers (tabs To pay / Paid out: the received purchase orders; the payment is recorded on the PO page)
Invoice, receipt	the document, ready to print
Materials	materials with lots, total and stock status; Add / Deduct / Adjust a lot
Movements	the history of every stock change
Customers, Products	list, search, add / edit / delete (products with their BOM)
Suppliers	suppliers with their items and prices
Users	list, add / edit / delete; a Worker must choose the department `Sales` or `Factory`
Forbidden, Not found	message and a way back

Menus: each entry shows only for the roles and departments that may use it; a menu with one visible entry is shown as that entry alone. The first entry of a Factory Worker is labelled "Today"; it opens the Dashboard. The language (English / Japanese) can be switched on every page.

The Purchase page (one page)

Area	Content
Stock to buy	the materials that are Low or Out: remaining, minimum level, status, "Create PO"
PO form	supplier, required date, department, item lines, quantity, price, total
PO list	PO No., supplier, required date, status buttons
PO detail	lines, Print PDF, payment, attachments

Redirects

- `/stock` opens `/stock/materials`; `/stock/:id` is redirected to the material page.
- `/sale/orders/new` opens `/sale/quotations`: an order is made by Confirm QT, never by hand.
- `/accounting/invoices`, `/accounting/invoices/new` and `/accounting/receipts` open `/accounting`; the invoice and the receipt keep `/:id` as documents.
- Old addresses of pages that moved (`/qt`, `/orders`, `/invoices`, ...) are redirected to their new place.
