What is on each page

Page	Content
Sign in	email and password
Dashboard (Admin, Sale)	order tiles (Draft, In progress, Completed); for the Admin also the invoice tiles and a chart of orders by status
Today (Factory)	orders to start, orders in production with a big "Record progress" button, purchase orders to receive, a strip for low stock
Sales work list	one row per job with its step (Draft, Confirmed, In production, Done)
QT page (one page for a job)	the steps of the job, customer, lines and total, Print button, customer PO upload (number, date, file), Confirm button; after Confirm the production order of the job on the same page: processes before the start, progress after it
Production orders	list of orders with their status
Production order	processes, start, progress, the customer PO file, QT link, evidence upload (images and documents)
Purchase orders	stock with low flags, the PO form, the PO list (see below)
Accounting	tabs To invoice / Waiting for payment / Paid; Issue invoice and Record payment in small dialogs; Open receipt
Invoice, receipt	the document, ready to print
Materials	materials with lots, total and stock status; Add / Deduct / Adjust a lot
Movements	the history of every stock change
Customers, Products	list, search, add / edit / delete (products with their BOM)
Suppliers	suppliers with their items and prices
Users	list, add / edit / delete; a Worker must choose the department `Sales` or `Factory`
Forbidden, Not found	message and a way back

Menus: each entry shows only for the roles and departments that may use it; a menu with one visible entry is shown as that entry alone. The language (English / Japanese) can be switched on every page.

The Purchase page (one page)

Area	Content
Stock	material, remaining, low flag, "Create PO"
PO form	supplier, required date, department, item lines, quantity, price, total
PO list	PO No., supplier, required date, status buttons
PO detail	lines, Print PDF, payment, attachments

Redirects

- `/stock` opens `/stock/materials`; `/stock/:id` is redirected to the material page.
- `/sale/orders/new` opens `/sale/quotations`: an order is made by Confirm QT, never by hand.
- `/accounting/invoices`, `/accounting/invoices/new` and `/accounting/receipts` open `/accounting`; the invoice and the receipt keep `/:id` as documents.
- Old addresses of pages that moved (`/qt`, `/orders`, `/invoices`, ...) are redirected to their new place.
